PROFESSIONAL SUMMARY

Senior Software Engineer with 8+ years of experience architecting distributed backend services, high-throughput streaming pipelines, and developer infrastructure. Proven track record leading core platform modernization, reducing p99 latency by 42%, and eliminating $180k in annual infrastructure spend. Passionate about resilient systems design, infrastructure as code, and mentoring high-velocity engineering teams.

TECHNICAL SKILLS

- **Languages & Runtimes**: Go, Python (3.11+), TypeScript, Java, SQL, Bash.
- **Frameworks & Ecosystems**: gRPC, REST, FastAPI, Gin, React, Node.js.
- **Cloud & Infrastructure**: AWS (EKS, RDS, DynamoDB, S3), Docker, Kubernetes, Terraform, Helm, GitHub Actions.
- **Data & Messaging**: Apache Kafka, PostgreSQL, Redis, Elasticsearch, Prometheus, Grafana, OpenTelemetry.
- **Architecture & Practices**: Distributed Systems, Microservices, Event-Driven Design, Zero-Downtime Deployments.

PROFESSIONAL EXPERIENCE

CloudScale Technologies

Senior Software Engineer | Platform Infrastructure — Jan 2022 – Present

- Architected and deployed an event-driven telemetry ingestion engine using Go and Kafka, processing 12M+ daily events with sub-25ms p99 latency across multi-region Kubernetes clusters.
- Spearheaded the migration of 14 monolithic services into decoupled containerized microservices on AWS EKS, reducing deployment cycle times from 45 minutes to under 6 minutes.
- Implemented distributed tracing and custom Prometheus alerting across 30+ production services, cutting mean-time-to-resolution (MTTR) for critical incidents by 58%.
- Designed an automated developer preview environment pipeline with Terraform and GitHub Actions, saving 18 engineering hours weekly and accelerating team shipping cadence.

Apex Financial Systems

Software Engineer | Core Services — Aug 2018 – Dec 2021

- Engineered transactional ledger and settlement APIs using Go and PostgreSQL, reliably processing $45M+ in daily transaction volume with zero accounting discrepancy.
- Optimized database indexing, query execution plans, and Redis caching layers, improving API throughput by 65% and reducing p99 response times from 340ms to 48ms.
- Authored comprehensive integration test harnesses and contract testing suites, elevating automated pipeline test coverage from 62% to 91%.
- Mentored 4 junior engineers on distributed systems debugging, database locking semantics, and idiomatic Go design.

Nexa Digital

Associate Software Engineer — Jul 2016 – Jul 2018

- Built full-stack features and internal administrative dashboards using Python, Flask, React, and MySQL.
- Designed automated database migration scripts and CI/CD quality gates, reducing faulty database deployments to zero.

EDUCATION & CERTIFICATIONS

University of Washington

Bachelor of Science in Computer Science — 2016

- AWS Certified Solutions Architect - Associate | HashiCorp Certified: Terraform Associate
